## **An interdisciplinary CubeSAT program at HKU**

The Laboratory for Space Research (LSR) at The University of Hong Kong (HKU) is an interdisciplinary unit within the Faculty of Science, established in January 2016 and currently comprising approximately 25 members spread out over the Departments of Physics and Earth Sciences focusing on a broad range of research programs in high energy astrophysics, planetary science (including remote sensing) and space science. I will describe our plans to set up an HKU-led CubeSat program, building on our strong ties with various leading Chinese institutions and industry partners.

**Primary author:** Dr SAZ PARKINSON, Pablo (Physics Department & Laboratory for Space Research, The University of Hong Kong)

**Presenter:** Dr SAZ PARKINSON, Pablo (Physics Department & Laboratory for Space Research, The University of Hong Kong)

**Session Classification:** Posters and Demos

**Track Classification:** Space Science with CubeSats and Small Sats
