

OpenSatCom: Open Source development methodology models for satellite communications

Saturday, 12 December 2020 14:55 (20 minutes)

OpenSatCom is a European Space Agency activity implemented by Libre Space Foundation in collaboration with Inno3 aiming to assess the relevance of open-source methodology models for the satellite communications sector, where such models can provide benefits and how can the European Space Agency contribute to assist relevant existing or new open-source projects.

A major output of this activity is the “Open Source Development Models for Satellite Communications” report.

This talk will discuss the findings of this report, the relevant projects identified, and the open-source sub-activities implemented as part of OpenSatCom.

Primary authors: KOSMAS, Eleftherios (Libre Space Foundation); PAPAMATTHEOU, Manthos (Libre Space Foundation); PAPADEAS, Pierros (Libre Space Foundation)

Session Classification: Room #1
